## **CURRICULUM VITAE**

### **A. Identity**

Name : Husen Mohamed Albakoush  
Sex : Male  
Place and Date of Birth : Alkhums, June 1<sup>st</sup>, 1988  
Religion : Muslim  
Address : Alkhums, Libya

### **B. Educational Background**

No	Name of School/Institution	Location	Degree	Year
1	Almargib	Alkhums, Libya	Primary	2001
2	Almargib	Alkhums, Libya	Secondary	2005
3	Almargib	Alkhums, Libya	Bachelor	2011
4	Diponegoro University	Semarang, Central Java, Indonesia	Master Program	2015

### **C. Family History**

1. Name of father : Mohammad Faraj Albakush
2. Name of mother : Rajaa Milad Alwirfaly

## **FOREWORD**

Assalamu'alaikum Wr. Wb.

Praise to Allah Almighty for all grace and guidance that thesis with the title “The Effect *Annona muricata* to Reduce Parasitemia, Increase Phagocytosis Index And Nitric Oxide Production (Study in Cerebral Malaria Phase of Swiss Mice)” can be resolved. This thesis is structured to meet one of the requirements to obtain a Master degree in Biomedical Sciences (MSi. Med) in the field of Immunology at the Faculty of Medicine, University of Diponegoro.

I realized that without the help and guidance of the various parties, it is not easy for me to finish this thesis. Therefore, on this occasion, the author would like to express respect and gratitude as possible to:

1. The rector of Diponegoro University who has provided an opportunity for authors to improve science learning.
2. Dean of the Faculty of Medicine, University of Diponegoro who has provided the opportunity for the author to participate in education.
3. Chairman Master of Biomedical Sciences Faculty of Medicine, University of Diponegoro who has provided motivation and support to the author to complete his education on time.
4. Dr. dr. RA. Kisdjamiatun RMD, M.Sc. as the First Counselor who has been willing to invest time, energy and mind to guide the writer for completing this thesis.

5. Prof. Dr. dr. Tri Nur Kristina, DMM., M.Kes. as the Second Counselor who has been willing to take the time, effort, and thought to guide the writer for completing this thesis.
6. dr. Sudaryanto, M.Pd.Ked, as the Head of the Laboratory of Parasitology, Faculty of Medicine, University of Diponegoro and the entire laboratory staff who have given permission Parasitology and support for research.
7. Prof. Sultana M. Faradz, PhD. and the entire staff Laboratory Cebior who have given permission and support for research.
8. Dr. MI. Tjahjati DM, SpPK. as Head of Laboratory GAKI and the entire staff Laboratory GAKI who have given permission and support for research.
9. dr. Noorwijayahadi, M.Kes. and the entire staff of the Laboratory of Pharmacology of the Faculty of Medicine, University of Diponegoro who have helped me during the study.
10. Professors and Lecturers in the Master of Biomedical Sciences Faculty of Medicine, University of Diponegoro who has given his knowledge during his education writer.
11. All employees / academic staff in the program as Master of Biomedical Sciences Faculty of Medicine, University of Diponegoro who have provided assistance for the author was educated.
12. Parents and the whole loved ones who have given prayers and support during the authors studied.

13. Fellow students of Master of Biomedical Sciences Faculty of Medicine, University of Diponegoro 2014 which has been jointly studying and providing support to authors.
14. To all those who have a lot to provide assistance, but can not mention one by one author.

With limited knowledge, the authors expect criticism and constructive suggestions for the perfection of this thesis.

Finally, the authors hope that Allah is pleased to reply to all the good of all those who have helped this thesis. Hopefully, this thesis can be useful for the development of science, especially Biomedicscience.

Wassalamualaikum Wr. Wb.

Semarang, August, 2015

## ABSTRACT

### **THE EFFECT OF ANNONA MURICATA TO REDUCE PARASITEMIA, INCREASE PHAGOCYTOSIS INDEX AND NITRIC OXIDE PRODUCTION (STUDY IN CEREBRAL MALARIA PHASE OF SWISS MICE)**

**Husen Mohamed Albakoush, RA. Kisdjamiyatun, Tri Nur Kristina**

**BACKGROUND:** Highest fatal case occurred in WHO data for African Region, where roughly 90% of all malaria deaths occur, and 78% of all deaths were children aged under 5 years. *Annona muricata* is commonly used for the treatment of malaria and/or fever. This research to prove that *Annona muricata* can reduce parasitemia, increase macrophages-phagocytic index and NO production of Swiss albino mice inoculated with PbA.

**METHOD:** Study design was experimental study using thirty six (36) swiss mice which devided into 6 groups were: healthy mice (C(-)), P1 and P2 with respectively without PbA inoculation but received *A. muricata* dosage 100 and 150 mg/kg BW; C(+) were group with inoculated PbA; P3 and P4 were group respectively inoculated PbA with received *A. muricata* dosage 100 and 150 mg/kg BW. Statistical analysis used One Way Anova for normality data distribution. Correlation test between two variables used Spearman Test.

**RESULT:** The highest parasitemia percentage was C(+), followed by P3 and P4 groups. The highest phagocytosis index was found in P1, followed by P2 and P3 group. C(-) showed a lower Phagocytosis index than C(+). P3 and P4 group demonstrated a lower phagocytosis index than C(+). The highest NO level in C(-). The highest NO level in inoculated group was found in C(+), followed by P4 and P3 group.

**CONCLUSION:** Non significant difference on the parasitemia was found among PbA-inoculated groups with or without *A. muricata* treatment. Non significant difference on the phagocytosis index was observed among six group studied with or without PbA inoculated and with or without *A. muricata* treatment. Significant effect on the NO level among PbA-inoculated groups with *A. muricata* treatment to reduce NO level.

**Keywords:** *A. muricata*, *P. berghei* ANKA, parasitemia, phagocytosis index, NO level.

## ABSTRAK

### PENGARUH SIRSAK UNTUK MENURUNKAN PARASITEMIA, MENINGKATKAN INDEKS PHAGOSITOSIS DAN PRODUKSI NITRIC OXIDE (STUDI PENYAKIT MALARIA SEREBRAL PADA SWISS ALBINO MICE)

Husen Mohamed Albakoush, RA. Kisdjamiyatun, Tri Nur Kristina

**LATAR BELAKANG:** Kasus yang fatal tertinggi pada data WHO di wilayah Afrika, di mana sekitar 90% dari seluruh kematian malaria terjadi, dan 78% dari seluruh kematian adalah anak-anak berusia di bawah 5 tahun. Sirsak umumnya digunakan untuk pengobatan malaria dan / atau demam. Penelitian ini membuktikan bahwa sirsak mengurangi parasitemia, meningkatkan indeks fagositik macrophages dan produksi NO mencit albino Swiss diinokulasi dengan PbA.

**METODE:** Desain penelitian adalah studi eksperimental menggunakan tiga puluh enam (36) tikus swiss yang terbagi menjadi 6 kelompok. K (-) adalah tikus yang sehat, P1 dan P2 adalah kelompok tanpa diinokulasi PbA dengan dosis *A. muricata* 100 dan 150 mg / kg BB. K (+) adalah grup dengan diinokulasi PbA, P3 dan P4 adalah kelompok dengan diinokulasi PbA dan dosis *A. muricata* 100 dan 150 mg / kg BB. Tes statistic menggunakan test Anova untuk data yang terdistribusi normal. Untuk uji korelasi antar dua variabel menggunakan uji Spearman.

**HASIL:** Parasitemia paling tinggi ditemukan pada C(+) yang diikuti oleh kelompok P3 dan P4. Indeks phagositosis paling tinggi ditemukan pada P1, diikuti oleh P2 dan P3. C(-) mempunyai indeks phagositosis lebih rendah dari C(+). P3 dan P4 menunjukkan indeks phagositosis yang lebih rendah dari C(+). Level NO paling tinggi pada C(-). Level NO paling tinggi pada kelompok inokulasi ditemukan pada C(+) diikuti dengan kelompok P4 dan P3.

**KESIMPULAN:** Tidak terdapat perbedaan yang signifikan dari treatment *A. muricata* pada parasitemia pada kelompok inokulasi PbA. Tidak terdapat perbedaan yang signifikan terhadap indeks fagositosis pada enam kelompok dengan atau tanpa inokulasi PbA dan dengan atau tanpa treatment *A. muricata*. Pengaruh yang signifikan pada level NO pada kelompok dengan inokulasi PbA kelompok tidak PBA-diinokulasi dengan pengobatan *A. muricata* untuk menurunkan level NO.

**Kata kunci:** *A. muricata*, *P. berghei* ANKA, parasitemia, indeks phagositosis, level NO.
