Abstract

This research aims to determine the relevance of the availability of collections to meet the needs of student information in the center library UPGRIS. This research is quantitative by using descriptive analysis of Product Moment Pearson correlation test. The population in this study is all UPGRIS students from all majors amounted to 9733 students, which then taken sample with the number of 264 students. To know the sample of research used cluster sampling technique. Data were collected by questionnaire then scored using Likert scale. The results showed that based on the frequency table and percentage of the results of data processing on the Relevance of Collection Availability in UPGRIS Central Library has been good (successful) and in accordance with the information needs and desires of the students. By showing the overall average value of 4.14 are included in either category. From the correlation test results, it can be known the correlation value of the availability of the collection variables with the needs of student information of 0.633 (positive) with a significant value or p-value of 0.000 means there is a significant relationship between the availability of library collections with the needs of information pemustaka. In accordance with the product moment pearson correlation test results, the value indicates a strong or high correlation (0.60-0.799). Then the value at 0.000, meaning there is a significant relationship between the relevance of the collection availability to meet the needs of student information because the value 0.000 <0.05, then H0 rejected and H1 accepted.

Keywords*: Relevance, Availability of Collection and Information Needs.*
