Overview of Emotional Intelligence and Caring Behavior of Nurses in the Inpatient Room of RAA Soewondo Hospital Pati

xv + 69 Pages + 11 Tables + 2 Pictures + 11 Attachments

Nursing care is one of the ethics of health services in hospitals, which nurses directly carry out the nursing process to patients. Emotional intelligence and caring behavior of nurses are needed in providing nursing care to patients. In running the service duty, the abilities contained in emotional intelligence and caring behavior of nurses such as self-awareness, self-regulation, giving attention, empathy, and self-motivation is very necessary for nursing services to be achieved optimally and of high quality so that patients will feel satisfied and encourage patient recovery. The purpose of this study was to describe the emotional intelligence and *caring* behavior of nurses in the Inpatient Room at RAA Soewondo Pati Hospital. Using a descriptive study with a *cross sectional* method with a total sample of 61 nurses implementing non-isolation Covid-19 inpatients. Data were collected using a questionnaire and the results showed that 48 respondents (78.7%) had high emotional intelligence and 13 respondents (21.3%) had moderate emotional intelligence. For nurse *caring* behavior showed that 51 respondents (83.6%) showed good, *caring* behavior and 10 respondents (16.4%) showed sufficient *caring* behavior. From the results of this study it can be concluded that, all respondents have high emotional intelligence and good *caring* behavior.

Keywords: Emotional Intelligence, *Caring* Behavior, Nurse
