ABSTRACT

This study aims to analyze the influence of the Regional Minimum Wage (UMR), Foreign Investment (PMA), Domestic Investment (PMDN), and Gross Domestic Product (GDP) on the number of Unemployed in Central Java in 2017-2022. This research uses the Fixed Effect Model (FEM) method. The type of data used in this research is Regency/City panel data in Central Java, which was obtained from the Badan Pusat Statistik (BPS) website. Based on the results of the research conducted, the variables of UMR, PMA, PMDN, and GDP simultaneously have no significant effect on the number of unemployment. The UMR variable partially has a significant positive effect on the number of unemployment. The PMA, PMDN, and GDP variables partially have no effect on the number of unemployment.

Keywords*: Unemployment, Regional Minimum Wage (UMR), Foreign Investment (PMA), Domestic Investment (PMDN), and Gross Domestic Product (GDP)*
