

ABSTRACT

The purpose of this research is to analyze the relationship between corporate governance and the firm performance. This research using ownership concentration, institutional ownership, publicly held ownership, and board size as a independent variable, and then firm performance which is measured by Return on Assets (ROA) as a dependent variable. In addition, leverage and firm age are used as a control variable.

This research using secondary data and the population of this research is 575 non-financial firms listed on Indonesian Stock Exchange in period 2016 – 2018. By purposive sampling methods, 120 non-financial firms were obtained as the sample of this research. The analytical method used in this research is multiple linear regression analysis.

The results of this research indicate that ownership concentration, institutional ownership, and publicly held ownership has a positive and significant effect on firm performance which is measured by ROA, but board size have insignificant effect on firm performance.

Keywords : *firm performance, ROA, ownership concentration, institutional ownership, publicly held ownership, board size*
