

ABSTRACT

This study aims first want to know whether there is significant influence from economic growth to regional disparity in Central Java, and then want to know whether there is significant influence from manufacturing agglomeration in Central Java as moderating variable to relation economic growth with regional disparity during 1994 until 2007.

With Williamson Indexs as regional disparity indicator, Balassa Indexs as manufacturing agglomeration, and economic growth in persen, which regressed using ordinary least square and take uji interaksi which known as Moderated regression Analysis (MRA), uji nilai selisih mutlak, uji residual as way to test regression moderating variable.

Regression result shows that economic growth, agglomeration individually does not have significant influence to regional disparity, and agglomeration is does not a moderating variable.

Key Word : Manufacturing Agglomeratrion, Economic Growth, Regional Disparity, Moderated regression Analysis (MRA)
