ABSTRACT

This study aims to examine the effect of empirically that superior information technology capabilities in a company have an influence on the performance of companies listed on the Indonesia Stock Exchange. The population in this study were all companies listed on the Indonesia Stock Exchange (IDX) from 2018 to 2019. Then using the purposive sampling method, 54 companies were obtained that match the criteria to be used as research samples.

The data is then used and then processed using the multiple linear regression method. The results of this study reveal that superior information technology capabilities have a significant positive relationship to company performance.

Keywords: Information Technology Capability, company performance
