UNIVERSITAS DIPONEGORO

2022

ABSTRACT

Background: *Sexual violence is any sexual act either actively or passively (without action), carried out by the will of the perpetrator and resulting in harm to the victim (physical, sexual, or psychological) that is not desired by the victim. The vulnerability factors for someone to experience sexual violence are educational factors, economic factors, social factors and environmental factors.*

Objective: *To determine the characteristics of victims of sexual violence at Dr. Kariadi Hospital Semarang in 2018-2021.*

Methods: *This research is an observational study using a descriptive study with a cross sectional research design. Subject selection used total sampling. The subjects of this study were patients who were victims of sexual violence at Dr. Kariadi Hospital Semarang in 2018-2021.*

Results: *Patients victims of sexual violence at Dr. Kariadi Semarang Hospital in 2018-2021, the highest fluctuation was in March with 15 cases and in 2019 with 32 cases. Most cases were experienced by early adolescents aged 12-16 years (49.0%), female gender (94.2%), mostly experienced by students (65.4%), unmarried (95.2%), frequency of experiencing the incident once (52.9%), duration of the incident until the examination was mostly >1 month (47.1%), most wound findings were lacerations (39.4%), most wound locations were genital (51.0%), the number of wounds was 1-3 (46.2%), and almost all continued to be VeR (66.3%).*

Conclusion: *The characteristics of patients victims of sexual violence at Dr. Kariadi Semarang General Hospital in 2018-2021 are the highest fluctuations in March and in 2019, age group 12-16 years, female gender, students, unmarried, frequency of sexual violence 1 time, duration of crimes > 1 month, description of lacerations, location of wounds on the genitals, number of wounds 1-3 and continued to VeR.*

Keywords: *Characteristics, sexual violence, victims of sexual violence.*
