CURRICULUM VITAE

Personal Data

Name : Donny Nauphar
Sex : Male
Nationality : Indonesian
Place & Date of Birth : Medan, November 25th 1981
Last Degree : Bachelor of Science (Biotechnology)
Address : Jendral Gatot Subroto 236H, Medan,
North Sumatera
Indonesia 20119
Mobile Phone : +62 81262511903
Email : dnauphar@yahoo.com

Educational Background

1990-1995 Elementary School at SD Harapan 1 Medan
1995-1997 Junior High School at SMP Harapan 1 Medan
1997-1999 High School at SMU Negeri 4 Medan majoring in Natural Science
1999-2000 Sunway College, Canadian International Matriculation Program,
Diploma in Science
2000-2003 Monash University, Bachelor of Science in Biotechnology

2012- Present Post Graduate Program Diponegoro University. Master in Biomedical Science Majoring in Genetic Counseling (Joint Degree Program with Vrije Universiteit Amsterdam, The Netherlands)

Training and Course

ACKNOWLEDGEMENT

It is a pleasure to express my gratitude to all of those who gave me the opportunity and support to complete this thesis. My heartfelt gratitude to my supervisor in Netherlands, Gerard Pals, PhD, and Erik Sistermans, PhD, for their support and encouragement in this research and for the hospitality during my stay in The Netherlands. Thank you for providing me the samples, adequate training and freedom to explore the topic that I am interested in during my research at the Center for Connective Tissue Disorders, Department of Clinical Genetics Vrije Universiteit Medisch Centrum, Amsterdam, The Netherlands.

My utmost gratitude to my teacher and supervisor, Prof. Dr. Sultana MH Faradz, PhD for her relentless support and guidance and despite her extremely busy schedule, still find time to encourage me to finish this thesis. Thank you to dr. Farmaditya EP Mundhofir, PhD for his patience and guidance in guiding me in writing this thesis.

My utmost gratitude to dr. Yahwardiah Siregar, PhD for the opportunity and all the support given to me during my research.

I wish to thank all the staff of the Center for Biomedical Research (CEBIOR), Semarang, Central Java, Indonesia, Dwi Kustiani, Intus, Lusi Suwarsi, Rita Indriati, and Wiwik Lestari for their assistance during my study.

I would also like to thank all the staff of the Department of Clinical Genetics Vrije Universiteit Medisch Centrum, Amsterdam, The Netherlands for their hospitality, help and guidance during my work in the laboratory. Special

thanks to Dimitra Micha and Youssef Moutouakil for mentoring me in Cell Culture and DNA works. My sincere thanks to great colleagues that support me during my stay, Kirsten Verheul, Mark aan t'Goor, Ans Morren, Irma Van Der Beek, Haweya Shire, Wesley Busch, Gwen Kwak, Jorrit Pals, Emily Nash and Martijn Boone.

I wanted to thank Batch 6 students of the Masters in Biomedical Science, Almira Zada, An Nisaa Utami Tihnutat, Ariestya Indah Permata Sari, Gara Samara Brajadenta, Hesty Wahyuningsih, Isna Rahmia Fara, Stefani Harum Sari, Venty Muliana Sari, Ziske Maritska, Zukhrofi Muzar and Wahid Mouhib. Your support and encouragement has been a source of inspiration for me to finish this thesis.

My sincere thanks also go to all the patients, whose fibroblast have been examined in the Department of Clinical Genetics Vrije Universiteit Medisch Centrum, Amsterdam. Without them, this research would not be possible.

My utmost gratitude to my parents, Salim Usman and Juanita Tanuwijaya and my in-laws, Sujono Djojodihardjo and Setiawati, to my wife Sesilia Susetiasih and my boys, Dito Aditama Usman and Devin Saputra Usman, who have been my strength and my support in my research.

This opportunity to join the Master's Degree, to have my research in the Netherlands would not have been possible without the fellowship from Biro Perencanaan Kerjasama Luar Negeri (BPKLN), Ministry of Education, Indonesia, especially DR. AB Susanto, MSc. as the *Beasiswa Unggulan* program coordinator.

I would like to thank all of the Master's Degree and Fellowship coordinators, especially Prof. Dr. Sultana MH Faradz, PhD, Dr. Tri Indah Winarni, MsiMed. PhD, Ms. Ardina Aprilani, and Dr. Farmaditya EP Mundhofir, PhD for all their hardwork.

GLOSSARY

Aneurysm	A localized, blood-filled balloon-like bulge in the wall of a blood vessel.
Aorta	A large blood vessel that distributes blood from the heart to the rest of the body.
Canonical	Typical pathway utilized by a signal transduction pathway.
Dissection	Tearing of layers in blood vessel that cause abnormal blood flow to occur in between the layers.
Fibroblast	Most common connective tissue in animals. Responsible for synthesis of extracellular matrix and collagen.
Kinase domain	Part of the protein that contains tyrosine, serine, threonine, and histidine that are target for phosphorylation by protein kinases.
Kinase substrate	Specific molecules target of protein kinase.
Ligand	A molecule that binds on a receptor
Microarray	Collection of DNA or protein fragments embedded on a solid surface. Often used for simultaneous analysis of large number of genes or proteins.
Non-canonical	Alternative pathway utilized by a signal transduction pathway.
Protein kinase	Enzyme that transfers high energy phosphate group for a donor molecule to a specific acceptor molecule.
Receptor	A protein molecule that receives ligands.
TGFβ pathway	A molecular pathway that controls proliferation, apoptosis, cellular differentiation, and other cellular functions.

ABBREVIATIONS

ACTA2	Actin Smooth Muscle Alpha 2
ATII	Angiotensin II
ATP	Adenosine Tri Phosphate
BAD	Bcl2 Antagonist of Cell Death
BAV	Bicuspid Aortic Valve
BCKDK	Branched-chain Ketoacid Dehydrogenase Kinase
BMP	Bone Morphogenetic Protein
COL3A1	Collagen type 3 Alpha 1
CGHB	Choriogonadotropin Subunit Beta Precursor
ECM	Extracellular Matrix

ABSTRACT

Background: Thoracic aortic aneurysm and dissection (TAAD) is one of the top 20 most leading causes in the USA and one of the silent killers in the world. The dysregulation of TGF β pathway has been linked with pathogenesis of the disease. TGF β pathway is a tightly regulated pathway that is controlled by phosphorylation of their downstream secondary messenger. The kinase substrate peptide microarray is utilized to see how the phosphorylation pattern of TGF β downstream secondary messenger is regulated in TAAD patient.

Methods: Fibroblast samples from 3 mutants with TAAD carrying TGF β RII mutations and 3 normal patients were grown and stimulated with TGF- β 1 after 24 hours of serum starvation. The cells were then lysed and their protein concentration determined using bicinchoninic acid (BCA) assay. The phosphorylation of kinase substrate peptides were then analyzed using Serine-Threonine Kinase Microarray Chip.

Results: Kinase substrate peptides were chosen based on the significant phosphorylation changes between controls and mutants of the stimulated and unstimulated groups. Four kinase substrate peptides were found under-phosphorylated between the controls and mutants of the TGF- β 1 unstimulated group. The TGF- β 1 stimulated group yields 34 significantly over-phosphorylated peptides and 1 under-phosphorylated peptide.

Conclusion: The non-canonical and canonical pathway is activated simultaneously in TAAD patients despite the absence of TGF β RII. Kinase substrate peptide has huge potential to unravel the complicated TGF β pathway via studying the phosphorylation pattern of TGF β downstream secondary messenger.

Keywords: Thoracic aortic aneurysm and dissection, TGF- β 1, *TGF β RII*, Serine-Threonine Kinase, Microarray

ABSTRAK

Latar Belakang: *Thoracic aortic aneurysm and dissection* (TAAD) adalah salah satu dari 20 penyebab kematian tertinggi di Amerika Serikat dan merupakan salah satu *silent killer* di dunia. Disregulasi *pathway* TGF β sering dikaitkan dengan pathogenesis aneurisma dan diseksi aorta. Komunikasi intraseluler TGF β adalah proses yang sangat teratur dan terjaga yang dikontrol ketat dengan fosforilasi komponen intraselulernya. Microarray peptida substrat kinase dapat digunakan untuk mempelajari bagaimana pola fosforilasi komponen intraseluler TGF β diatur pada pasien TAAD.

Metode: Sampel fibroblast dari 3 mutan TAAD dengan mutasi TGF β R11 dan 3 sampel normal dikultur dan di stimulasi dengan TGF- β 1 setelah puasa serum selama 24 jam. Sel-sel tersebut kemudian di lisis dan konsentrasi proteinnya dihitung dengan *bicinchoninic acid (BCA) assay*. Pola fosforilasi peptide substrat kinase dianalisa dengan menggunakan *Serine-Threonine Kinase Microarray Chip*.

Hasil: Peptida substrat kinase dipilih berdasarkan besar perubahan pola fosforilasi antara kontrol dan mutan pada grup yang distimulasi dan tidak distimulasi. Empat peptida substrat kinase memiliki tingkat fosforilasi yang sedikit lebih rendah antara mutan dan kontrol pada grup yang tidak distimulasi dengan TGF- β 1. Mutan pada grup yang distimulasi dengan TGF- β 1 memiliki 34 peptida yang memiliki tingkat fosforilasi yang lebih tinggi dan 1 peptida yang memiliki tingkat fosforilasi yang sedikit lebih rendah dibandingkan dengan kontrol.

Kesimpulan: *Pathway canonical* dan *non-canonical* tetap aktif secara bersamaan pada pasien TAAD walaupun tidak memiliki TGF β R11. *Microarray* adalah metode yang berpotensi untuk mengungkap *pathway* TGF β yang kompleks melalui analisa pola fosforilasi reseptor intraseluler TGF β .

Keywords: *Thoracic aortic aneurysm and dissection*, TGF- β 1, TGF β R11, kinase Serine-Threonine, *Microarray*
