Title : Assessment of Oral Health-related Quality of Life in Patients after Root Canal Treatment (Case Study in Oral Department of RSND Semarang)

Counsellor : drg. Nadia Hardini, Sp.KG

drg. Avina Anin Nasia, M.Sc

Objective: To determine the oral health-related quality of life (OHRQoL) status of patients after root canal treatment in the Oral Department of RSND Semarang Hospital. **Method:** This research is a cross-sectional descriptive study. The respondents of the study were 98 patients who underwent root canal treatment in the Oral Department of RSND Semarang Hospital and met the inclusion criteria using consecutive sampling. Data collection was done using a questionnaire. Data analysis was done using descriptive statistics. **Results:** The study results showed that patients after root canal treatment in the Oral Department of RSND Semarang Hospital had an average score of 9,49 and fell into the "Good" OHRQoL category. **Conclusion:** The average OHRQoL score for patients after root canal treatment in the Oral Surgery Department of RSND Semarang Hospital was 9,49, which falls into the "Good" category.

Keywords: OHRQoL, root canal treatment.
