**Hubungan Kecerdasan Spiritual Perawat Pelaksana dengan Pelaksanaan Asuhan Keperawatan di Ruang Rawat Inap RS Roemani Muhammadiyah Semarang**

**Lxii + 89 Halaman + 13 Tabel + 4 Gambar + 11 Lampiran**

Pelaksanaan asuhan keperawatan adalah rangkaian proses pemberian pelayanan kesehatan dengan menerapkan metode proses keperawatan yang diberikan langsung oleh perawat terhadap klien. Banyak faktor yang diduga mempengaruhi individu perawat dalam melaksanakan tugasnya sebagai pemberi asuhan keperawatan, salah satunya ialah faktor individu berupa kecerdasan spiritualnya. Tujuan penelitian ini untuk mengetahui hubungan kecerdasan spiritual perawat pelaksana dengan pelaksanaan asuhan keperawatan di RS Roemani Semarang. Metode penelitian yang digunakan adalah kuantitatif non-eksperimental. Teknik sampling yang digunakan dalam penelitian ini adalah *total sampling* sebanyak 70 perawat. Kriteria inklusi penelitian ini adalah perawat pemberi asuhan keperawatan kepada pasien di ruang rawat inap non infeksi di RS Roemani, tidak sedang cuti, sakit, atau menempuh tugas belajar, serta bersedia menjadi responden penelitian. Hasil penelitian diperoleh sebanyak 41,4% responden memiliki kecerdasan spiritual tinggi dan pelaksanaan asuhan keperawatan baik, 14,3% responden memiliki kecerdasan spiritual tinggi tetapi pelaksanaan asuhan keperawatannya kurang baik, 18,6% responden memiliki kecerdasan spiritual rendah tetapi pelaksanaan asuhan keperawatannya baik, serta 25,7% responden memiliki kecerdasan spiritual rendah dan pelaksanaan asuhan keperawatannya kurang baik. Hasil uji statistik menunjukkan terdapat hubungan bermakna antara kecerdasan spiritual perawat dengan pelaksanaan asuhan keperawatan yang memiliki arah hubungan positif lemah dengan *p value* 0,005 dan *r value* 0,329. Kesimpulan dari penelitian ini adalah semakin tinggi kecerdasan spiritual yang dimiliki perawat, maka semakin baik pula pelaksanaan asuhan keperawatannya.

**The Relationship between the Spiritual Intelligence of Implementing Nurses and the Implementation of Nursing Care in the Inpatient Room of Roemani Muhammadiyah Hospital Semarang**

**lxii + 89 Pages + 13 Tables + 4 Figures + 11 Attachments**

The implementation of nursing care is a series of processes of providing health services by applying the nursing process method given directly by nurses to clients. Many factors are thought to influence individual nurses in carrying out their duties as nursing care providers, one of which is individual factors in the form of spiritual intelligence. This study aimed to determine the relationship between the spiritual intelligence of implementing nurses and the implementation of nursing care at Roemani Hospital, Semarang. The research method used is non-experimental quantitative. The sampling technique used in this study was a total sampling of 70 nurses. The inclusion criteria of this study were nurses who provided nursing care to patients in non-infectious inpatient rooms at Roemani Hospital, were not on leave, sick, or taking study assignments, and were willing to be research respondents. The results obtained were 41,4% respondents had high spiritual intelligence and good nursing care, 14,3% respondents had high spiritual intelligence but the implementation of nursing care was not good, 18,6% respondents had low spiritual intelligence but the implementation of nursing care was good, and 25,7% respondents had low spiritual intelligence and implementation nursing care is not good. The results of statistical tests showed that there was a significant relationship between the spiritual intelligence of nurses and the implementation of nursing care which had a weak positive direction with a p value of 0.005 and an r value of 0.329. This study concludes that the higher the spiritual intelligence of nurses, the better the implementation of nursing care.
